

 **Polaris**

280

For all in-ground pools.
Works with
a booster pump.

The Polaris 280, renowned for its robust design and powerful cleaning action sweeps, scrubs and vacuums the bottom and walls of even the most difficult to clean pools.

Powered by dual vacuum jets and an integrated booster pump, the Polaris 280 will clean an average size pool in less than 3 hours, including picking up large debris most cleaners are unable to handle.

P R E S S U R E C L E A N E R

Utilising the world renowned Polaris pressure cleaning technology, the Polaris 280 is the most popular pressure cleaner in Australia. Operating from its own booster pump, the Polaris 280 delivers superior all-round cleaning performance, perfect for pools of all shapes and sizes.

1 Filter Bag

Unlike suction cleaners the Polaris 280 collects debris in its unique filter bag before it reaches the filter (reduces filter cleaning by up to 80%).

2 Patented 3 Wheel Design

The patented 3 wheel design of the cleaner assists with turning and movement of the machine out of corners and steps. In addition, the 3-wheel design ensures the cleaner very rarely approaches the pool walls square-on; a common cause of other cleaners getting caught.

3 Dual Vacuum Jets

The Polaris 280 is powered by 2 vacuum jets that provide fast and efficient cleaning performance (cleans pools in less than 3 hours!).

4 Throat Intake

The Polaris 280 has the largest throat of any Polaris cleaner and an extra large vacuum bag making it the ideal cleaner for picking up large debris such as leaves, gum nuts and pebbles.

5 Translucent Housing

The stylish housing provides superior resistance to UV discolouration and improved weatherability.

Pressured Booster Pump

The Polaris 280 operates off an integrated booster pump in conjunction with the main pool pump. Installed into a 40mm or 50mm dedicated line or in some cases a solar line provision the Polaris 280 operates at 100% efficiency.

Patented TankTrax Tyres

The Polaris 280 is also available in a TankTrax model. The TankTrax tyres provide improved climbing and maneuverability particularly on tile and fiberglass surfaces and in pools with sharp wall-floor junctions.

Optional Extras

Leaf Bag - Ideal for heavier debris pools

Sand/Silt Bag - Ideal for finer debris such as sand and silt

PosiTrax Tyres - Provide extra grip in tiled and fibreglass pools

MV3/Power Separator - Safeguards your equipment against power surges and protects your booster pump from running dry
